

# Securing the cloud

Fortune 500 companies rely on Coalfire's deep understanding of cloud technologies to help them navigate their cybersecurity needs and meet compliance requirements. If you can answer yes to any of these questions, we can help you, too.

Are you concerned about the cyber risks of transitioning your business to the cloud?

Are you confused about how to meet differing global data laws?

Are you unclear how secure your services are in the cloud, even while using third-party cloud security services?

Have you struggled to meet (multiple) compliance requirements?

Are you not confident in what you're seeing or hearing from your current advisor?

As the cloud assessor, we have already answered these questions for many clients. Our team of professional service consultants regularly advise and assess cloud service providers and businesses that move to the cloud.

## IMPROVE CYBERSECURITY WHILE MEETING COMPLIANCE REQUIREMENTS

From developing and implementing a cyber risk program to assessing your business against today's most pressing regulatory and industry compliance programs, we guide you through the cybersecurity and risk management process to improve your company. Our assessment methodology provides more secure options to meet compliance than the minimally accepted requirement.

If you're experiencing audit fatigue due to multiple audits and assessments, ask about our consolidated audit approach. We can consolidate your organization's multiple assessment needs into a single audit cycle that leverages the same interviews, policy and procedure evaluations, and technical testing to complete one report, which then receives multiple certifications. This approach frees your staff from having to participate in multiple assessments throughout the year.

## COALFIRE SERVICES

### Consulting

We can work with your company to develop and assist in implementing a cyber risk management program. We can advise and guide your organization as to your current security and compliance program effectiveness with hands-on workshops, gap assessments, documentation support, and policy development.

### Technical testing

Coalfire Labs can emulate real-world attacks on your company as part of your proactive approach to cyber security. From basic social engineering to enterprise or "red team" penetration testing, we assess multiple attack vectors of your organization to find vulnerabilities and exploits before threat actors do.

**Assessments**

As your trusted assessor for cyber risk management, we are accredited and certified to assess:

- Cloud Security Alliance Security, Trust, and Assurance Registry (CSA STAR)
- Department of Defense (DoD) Security Requirements Guide (SRG)
- FedRAMP
- Federal Financial Institutions Examination Council (FFIEC)
- FISMA
- HIPAA / HITECH
- HITRUST
- International Traffic in Arms Regulations (ITAR)
- ISO 27000 series
- PCI, PCI Data Security Standard (PCI DSS), PCI Payment Applications DSS (PCI PA-DSS), and PCI PA-DSS Point-to-Point Encryption (P2PE)
- SOC 1, 2, and 3

**Cyber risk management**

We can assess your organization’s current cyber program, system risks, and controls, and then recommend steps for improvement. This may include policy development, business continuity, and plans to reduce risk of lost IP and damaged reputation.

In addition, our team uses **CoalfireOne<sup>sm</sup>** to ensure projects are consistently managed and that compliance challenges are identified early so they can

be addressed quickly and cost-effectively. CoalfireOne is designed for collaboration to ensure our clients are an integral part of the assessment process.

**Cyber engineering**

Through our cyber engineering services, we help you design, integrate, optimize, and monitor your security systems to be as secure, effective, expansive, and reliable as possible – from day one. From aligning your security strategy to business objectives through ongoing monitoring and continuous support, we empower you to optimize your security posture.

*“We did more with Coalfire in eight weeks than we did in the previous year with other companies.”*

CHRIS GRADY, PRESIDENT, CLEAR GOVERNMENT SOLUTIONS  
IAAS CLOUD PROVIDER
